
Introduction to Figma

What is Figma

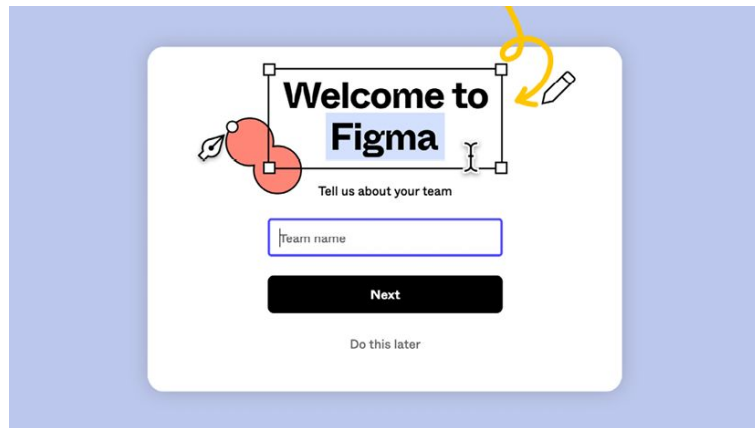

Figma is a vector design tool that runs in the browser

Use Figma to **brainstorm ideas, iterate on designs, create prototypes**, and get feedback at any stage of the creative process

Get started with Figma

Create a Figma account

`https://help.figma.com/hc/en-us/articles/360039811114-Create-a-Figma-account`

Sign up using Email

Head to **Figma.com** and click **Sign up** in the top right corner

Enter your **Email** address in the field provided

Enter a unique **Password** in the field underneath

Click the **Sign up** button to complete the process

You will be logged into your new **Figma** account immediately

Sign up using Email

Figma will send you an email to verify your account

Open the email, and click the verification button to complete the process and log into your new **Figma** account

Google account

Head to **Figma.com** and click Sign up in the top right corner.

Or, follow this link directly: **<https://www.figma.com/signup>**

Select **Continue** with **Google** at the top of the window

If you're already logged in to **Google**, you'll be prompted to confirm your details

Otherwise, enter your **Google** email or Phone in the field provided and click **Next**

Google account

You will then be able to **Enter** your password

Click **Next** to complete the process

A **Figma** account will then be created under your name and email address

Exploring the welcome screen

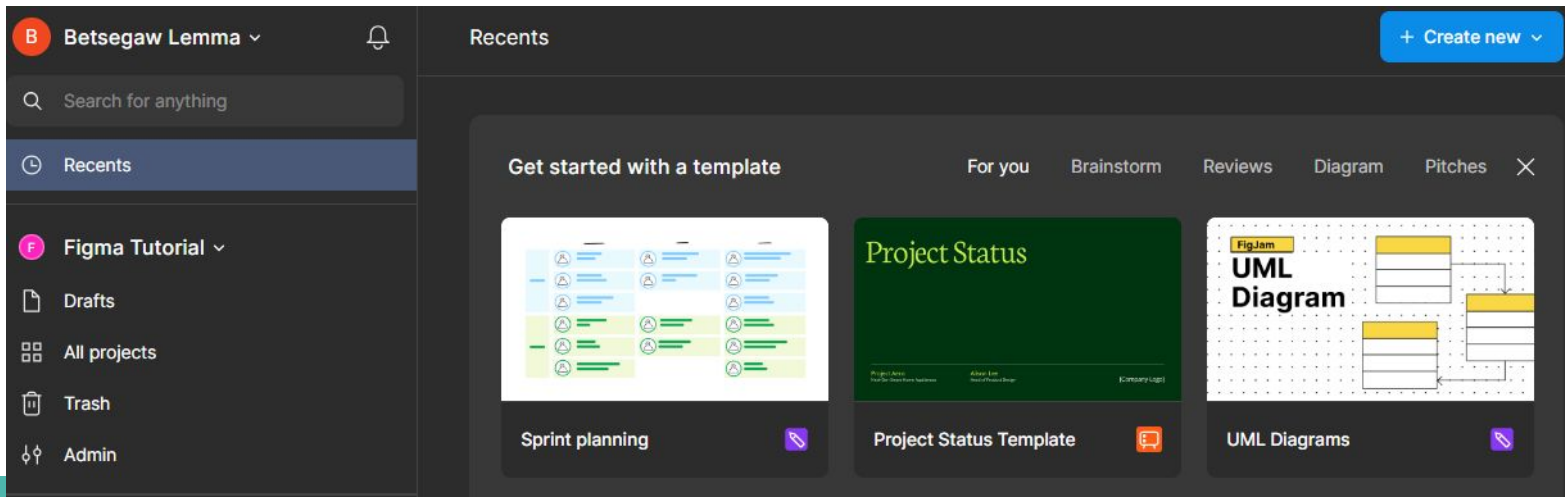

Whenever you open Figma, the first thing you see is the file browser

Exploring the welcome screen

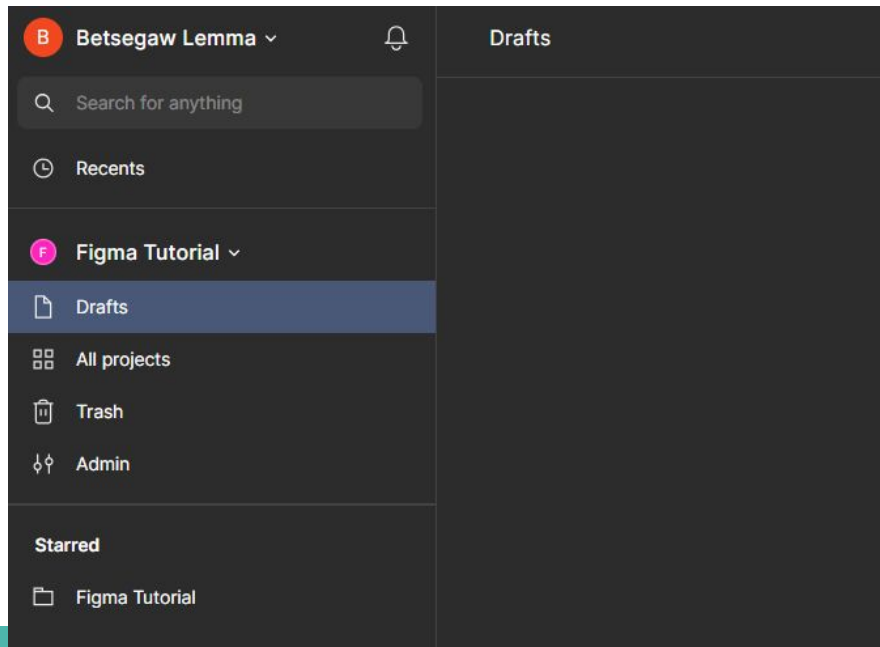

Recents in the left sidebar shows you all the files and prototypes that you've recently opened or edited

This area includes files and prototypes from your drafts, teams, and any files you opened

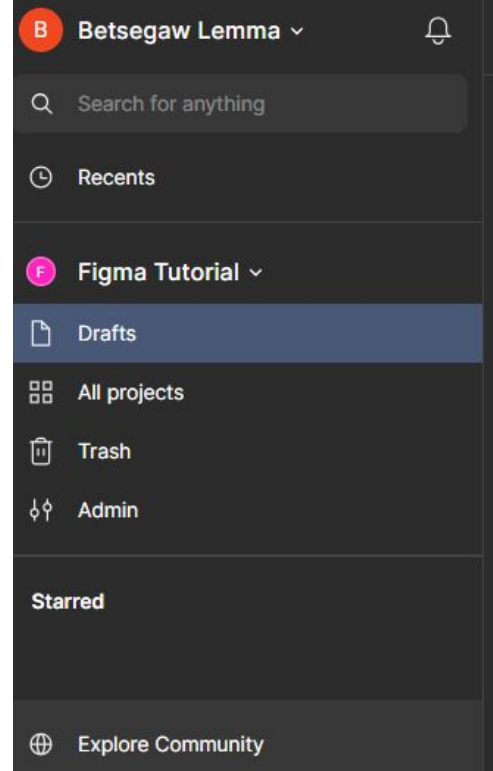

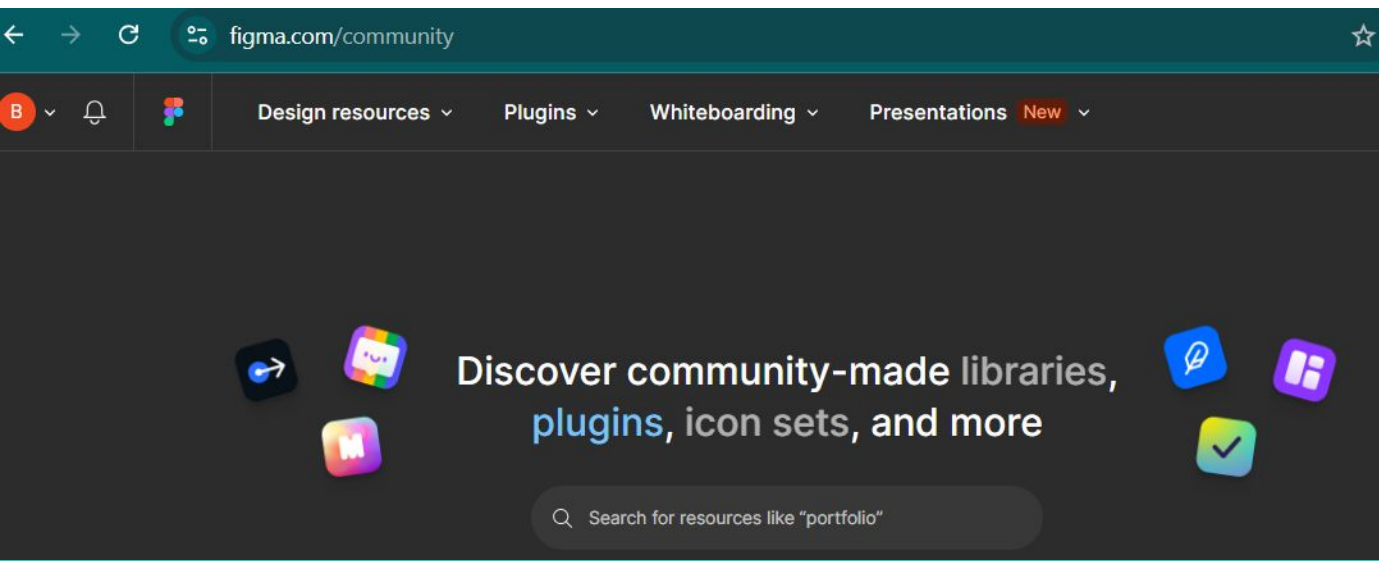

Exploring the welcome screen

Drafts lets you play with Figma, draw mockups, and test ideas without worrying about others seeing them

Exploring the welcome screen

Figma's Community feature is a place for all creators to share their design files, widgets, and plugins with others

Exploring the welcome screen

Teams and projects

Teams, unlike **Drafts**, are about collaboration

You can invite an unlimited number of viewers to your file in Drafts, but not editors

Once you create or move your file to a team, you can add as many editors as you want, and you can all work on the same file in real time

Exploring the welcome screen

Teams and projects

A team is your collaborative space

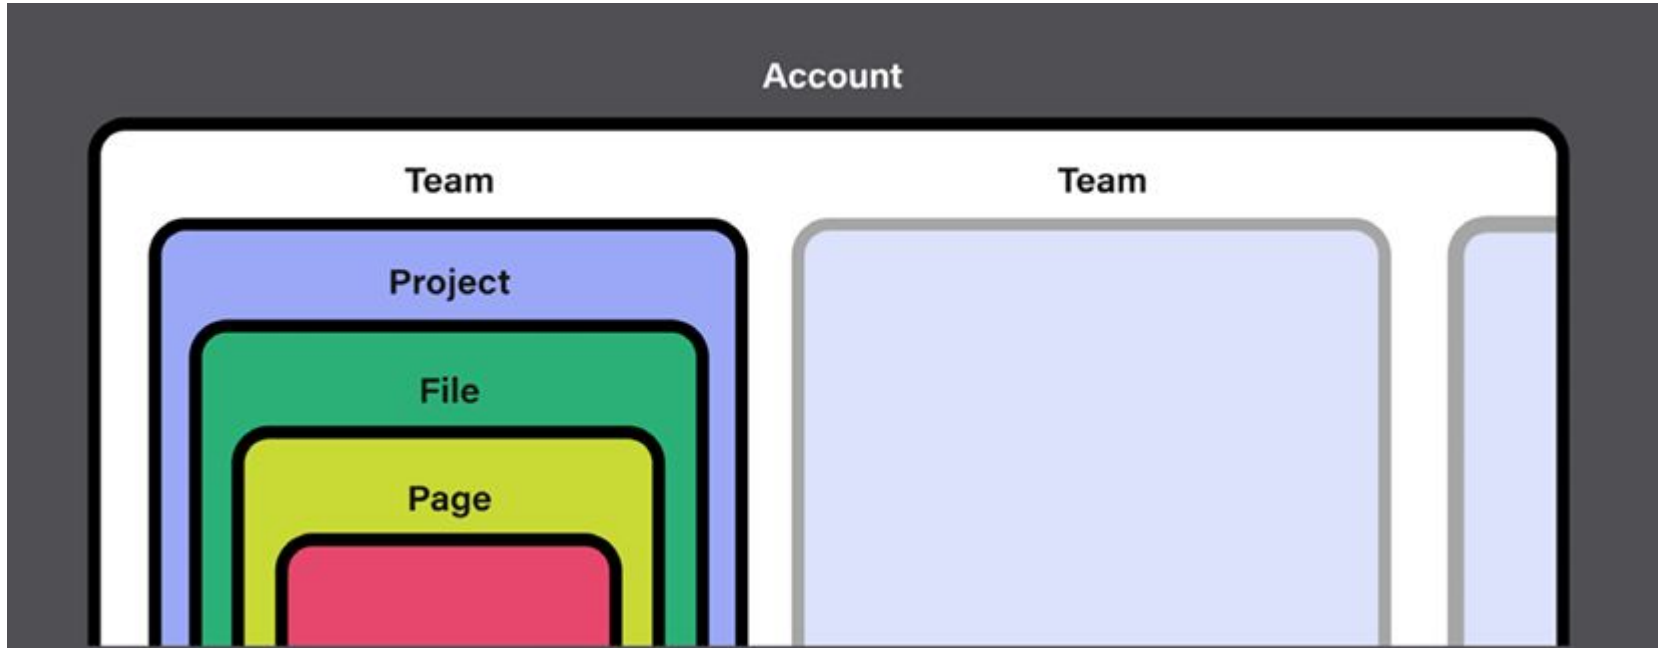

A project, just like a shared folder, helps organize your files within a team

Files are your actual design and Figma documents

Each design file can contain one or more pages (up to three for a Starter plan)

Exploring the welcome screen

Teams and projects

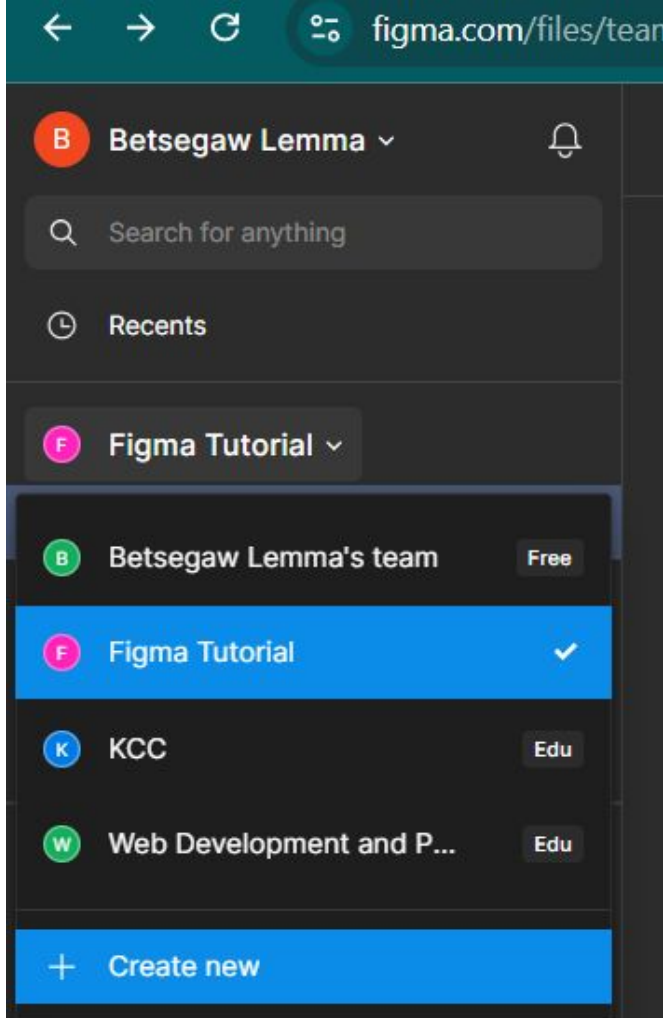

Exploring the welcome screen

Creating Teams

In the left column, expand the current team

Click on Create new

Exploring the welcome screen

Creating Teams

Select a name for your team and click **Create team**

① Name your team ② Add team members ③ Finish setup

Create a team

Team name

After creating a team, you can invite others to join.

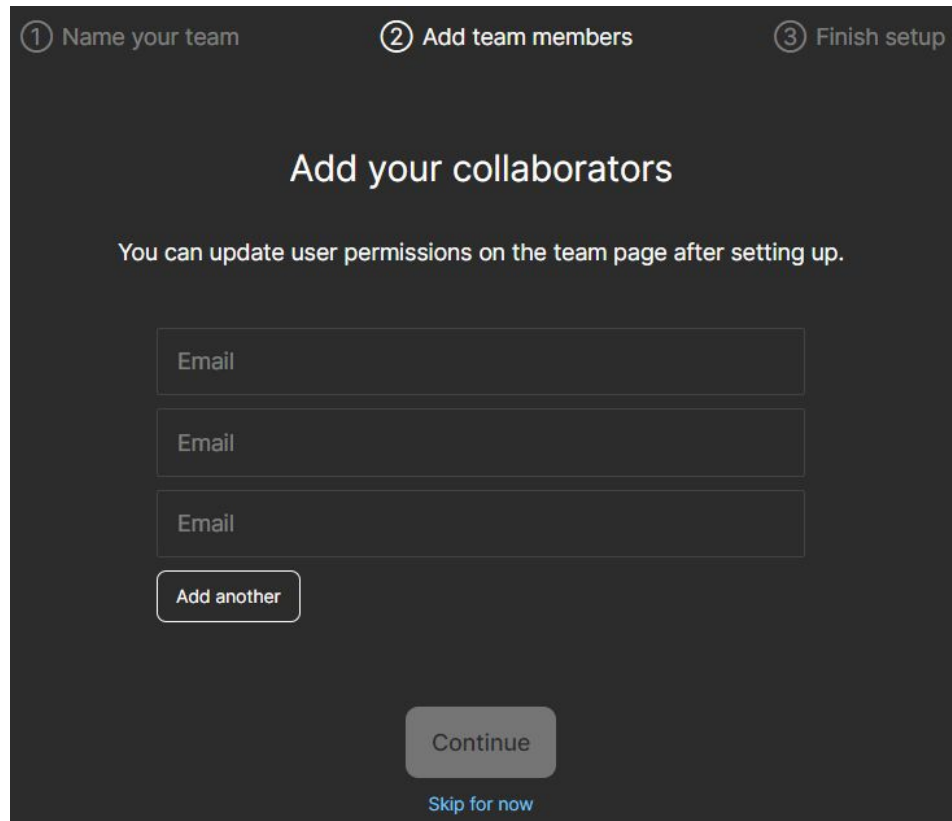

Create team

Exploring the welcome screen

Creating Teams

You'll be asked to add collaborators to the team by entering their email addresses

You can skip this part and add people to your team whenever you want

The screenshot shows a dark-themed interface for adding team members. At the top, there are three steps: ① Name your team, ② Add team members (which is the current step), and ③ Finish setup. The main heading is 'Add your collaborators'. Below it, a message states: 'You can update user permissions on the team page after setting up.' There are three input fields, each labeled 'Email'. Below the input fields is a button labeled 'Add another'. At the bottom right, there is a 'Continue' button and a link labeled 'Skip for now'.

① Name your team ② Add team members ③ Finish setup

Add your collaborators

You can update user permissions on the team page after setting up.

[Skip for now](#)

Exploring the welcome screen

Creating Teams

The final step is choosing a plan

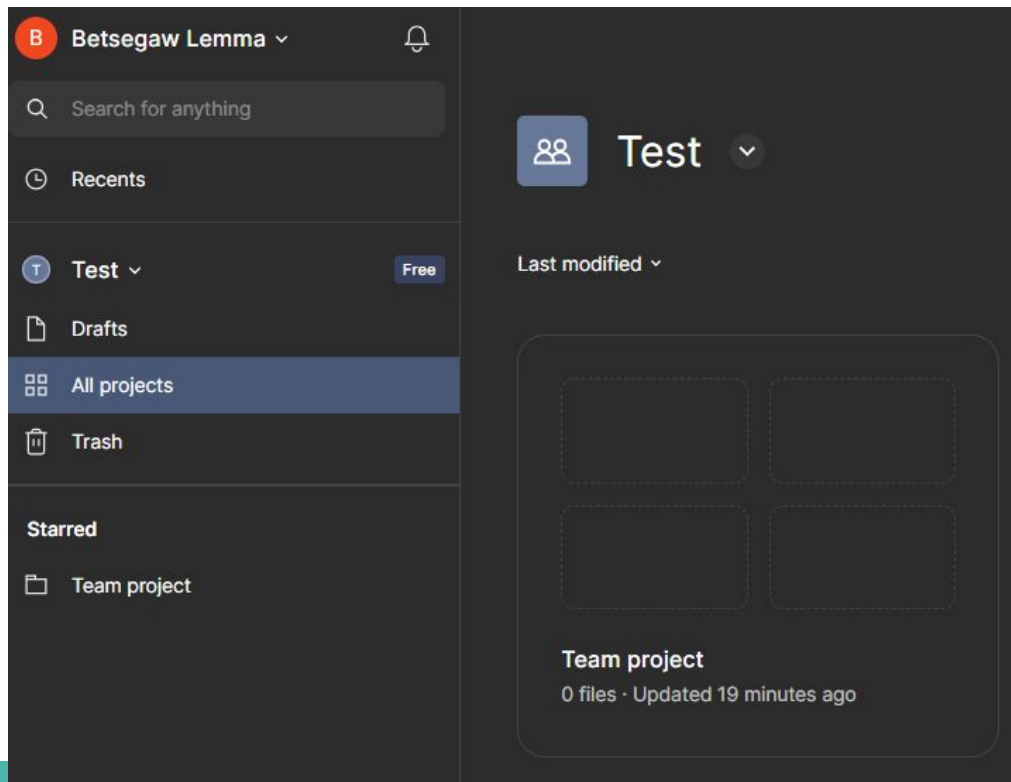

The free starter plan won't be available if you already have one

Exploring the welcome screen

Creating Teams

Once your team is set up, you should see it on the left sidebar of the welcome screen, ready to be used

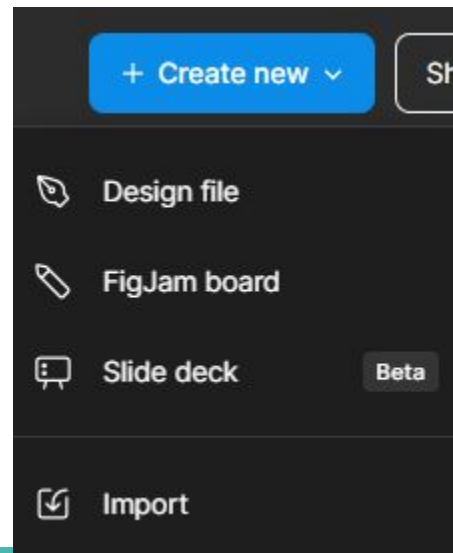

Exploring the welcome screen

Figma and FigJam files

FigJam is a whiteboarding tool that you can use with your team to brainstorm, build flows, organize your ideas

Design file is where you will do your designs

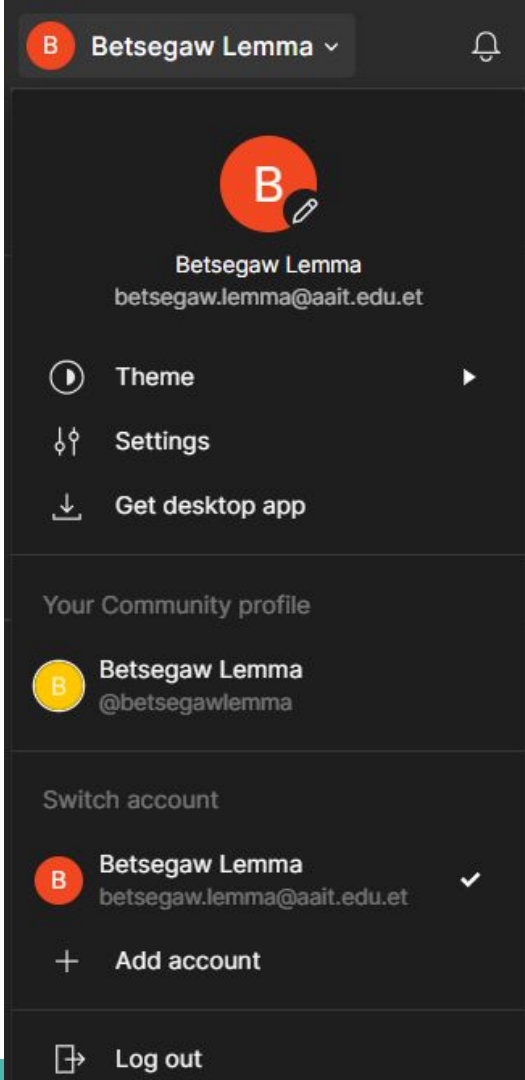

Exploring the welcome screen

Account and notifications

There is a bell icon right next to your account name. This is where you will see all your personal notifications about invitations to shared files and so on

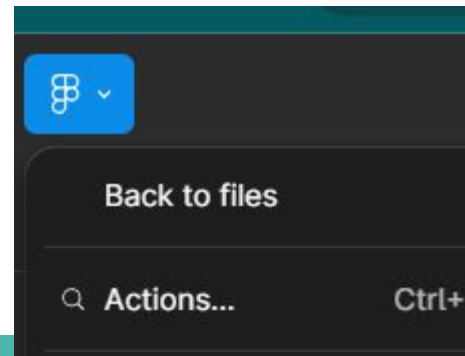

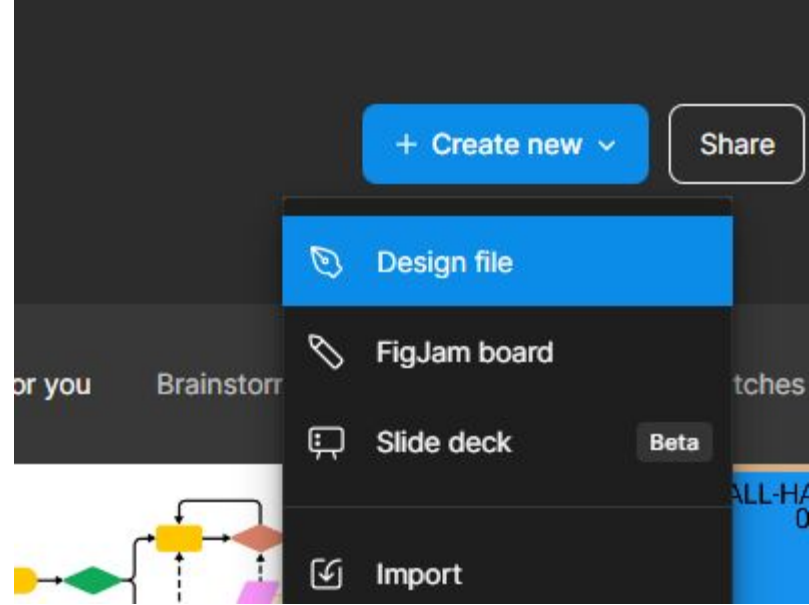

By clicking on your name or avatar, you can access all settings, add accounts, log out, and more

Design Files

To create a new blank design file, open the welcome screen and click on Design file right at the top

To go to the welcome screen if you are not there, click on the Main menu (the Figma logo in the upper-left corner) and select Back to Files from the drop down menu

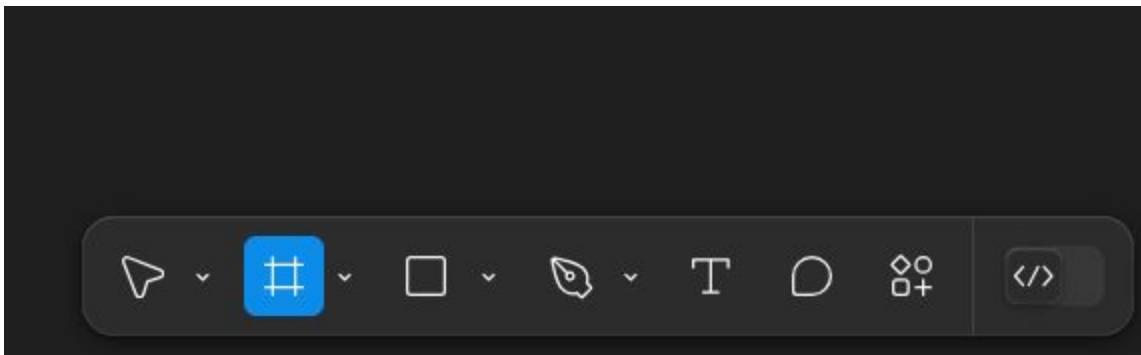

Design File Exercise

Create a design file and name it <region_name_file_1>

Frames and groups

A frame is a container

You can use custom-sized frames or choose practical presets for the most common standards, such as mobile devices, tablets, desktop resolutions, and even social media

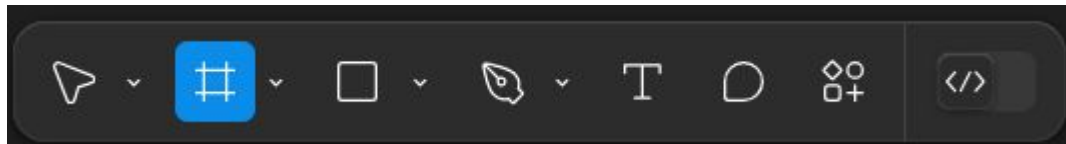

Frames and groups

To create a frame, you can use the **Frame tool** toolbar (using the F or A shortcuts) and proceed in three different ways:

Click any blank area on your workspace to create a default 100 x 100 frame.

Click and drag with your cursor to create a custom-sized frame.

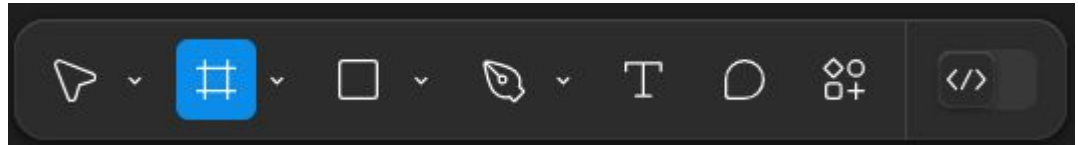

Click on any preset size on the right panel to automatically create a frame of the appropriate size.

Frames and groups

You can add more than one frame in your workspace

You can also nest a frame inside another frame

Frame Exercise

Create a frame for a desktop

Create a frame with size 600 width and 400 height

Frames and groups

A group combines several objects into one layer without flattening them, allowing you to maintain a fixed relationship between inner elements when scaling

If you want to create a group of objects, just press **Ctrl + G** after selecting the desired elements on the canvas

We can ungroup at any time by pressing **Shift + Ctrl + G**

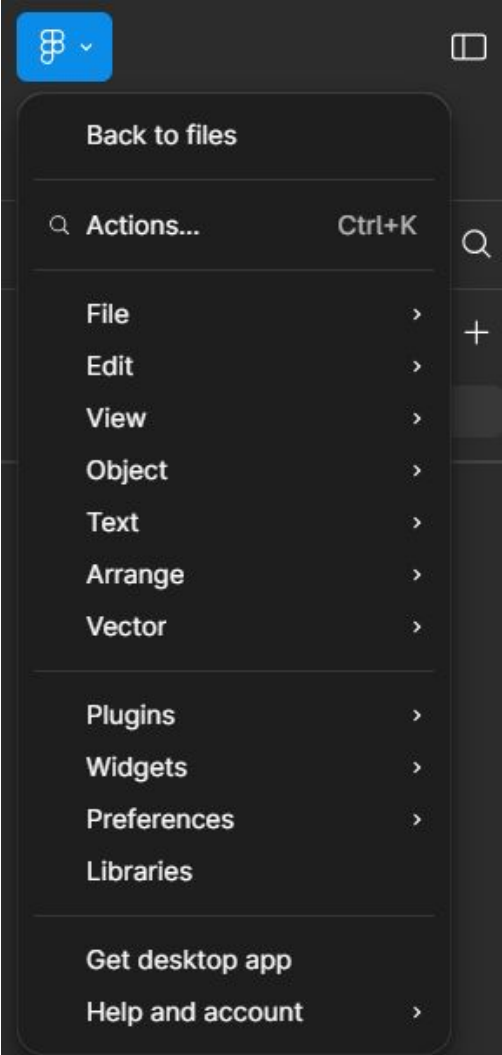

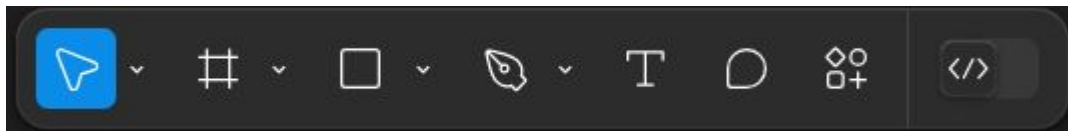

Frames and groups

To visually understand frames and groups, combine two shapes into one frame and do the same with a group, and then try resizing the two containers

In the group, the shapes will be resized accordingly, while in the frame, what is scaled is only the frame itself, while the shapes retain their original size and position

Exploring the toolbars and menu items

The toolbar and menus contains Figma's basic tools and settings

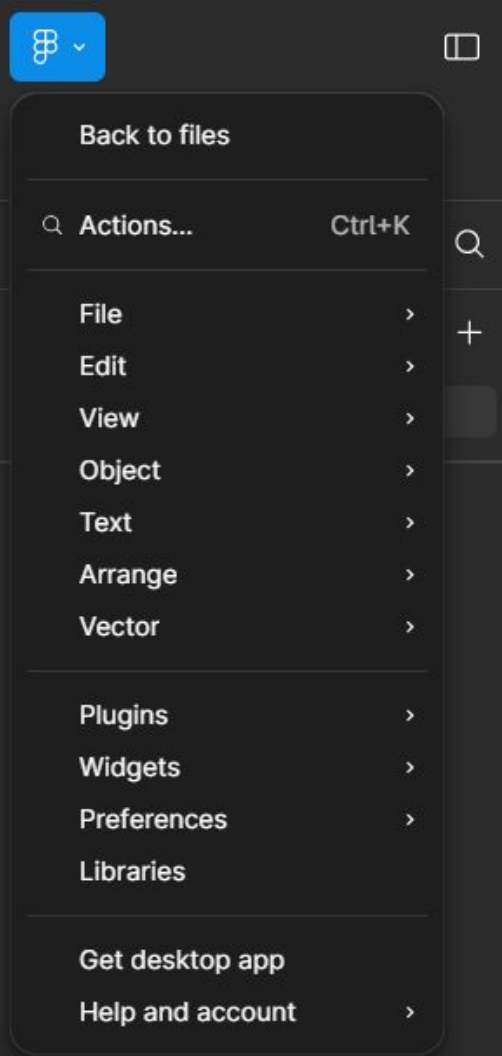

Exploring the toolbars and menu items

Menu

It is located under the Figma logo in the upper-left corner

It serves as the main control center, providing options for importing, exporting, selection, display, and various other functions

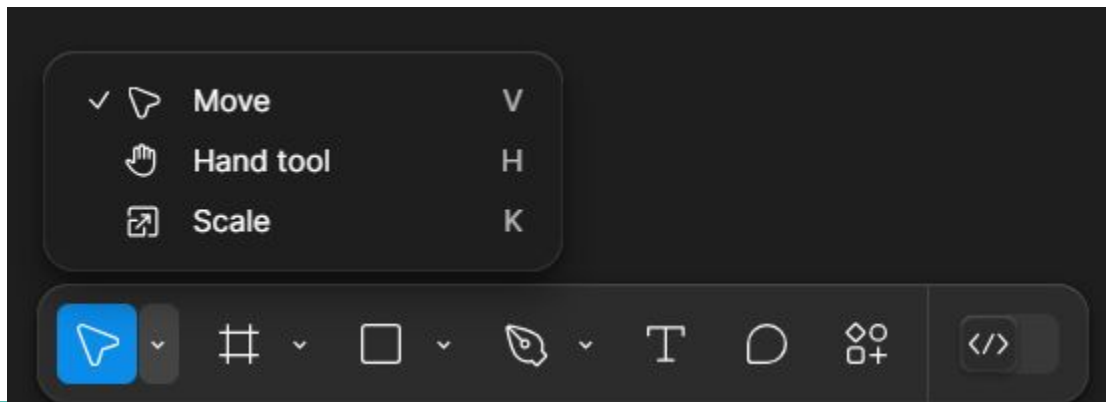

Exploring the toolbars and menu items

Move

This is the main tool that you can use to select, move, resize, and rotate any element on the screen, including frames.

By clicking and dragging, you can draw an area that will include and select all items inside it

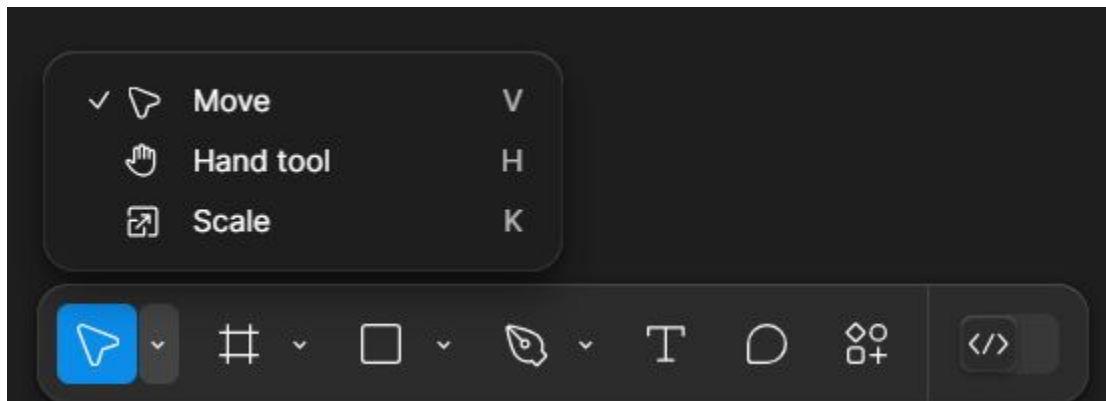

Exploring the toolbars and menu items

Move

You can use V key shortcut on your keyboard to quickly access the Move tool

Figma itself will automatically return you to this tool when you're done with any other tool

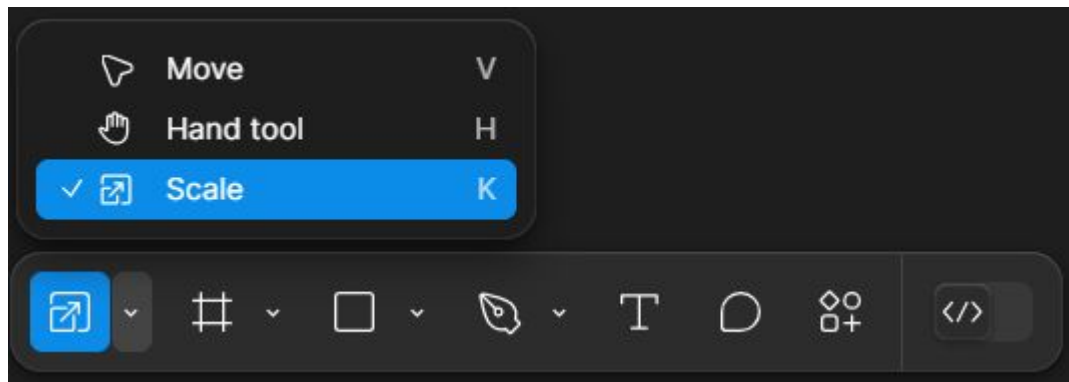

Exploring the toolbars and menu items

Scale

The Scale tool (to quickly switch to this function, use the K shortcut) is used to resize any element in your working area

It resizes any object in proportion to its original dimensions or the frame in which it is nested

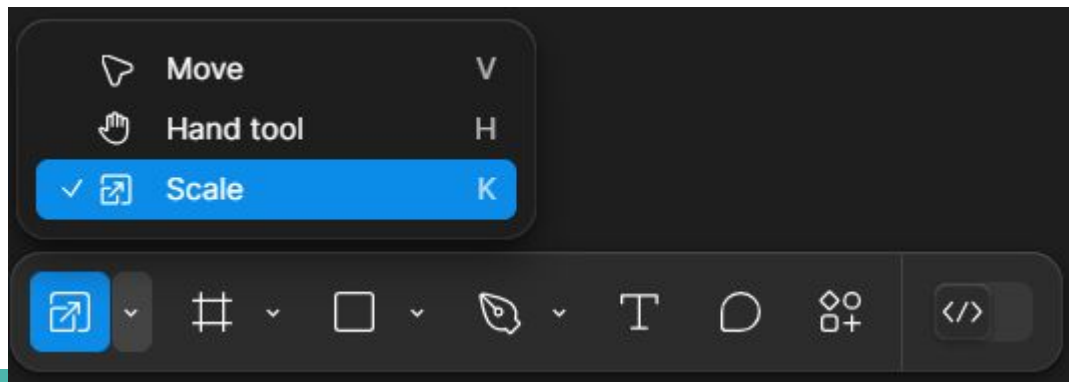

Exploring the toolbars and menu items

Scale

To understand this better, type some text by pressing the T key, and then select and enlarge it with the Move tool. You can see that only the textbox will be larger and not the text itself

If you use the Scale tool, the font-size property will resize to fit the textbox

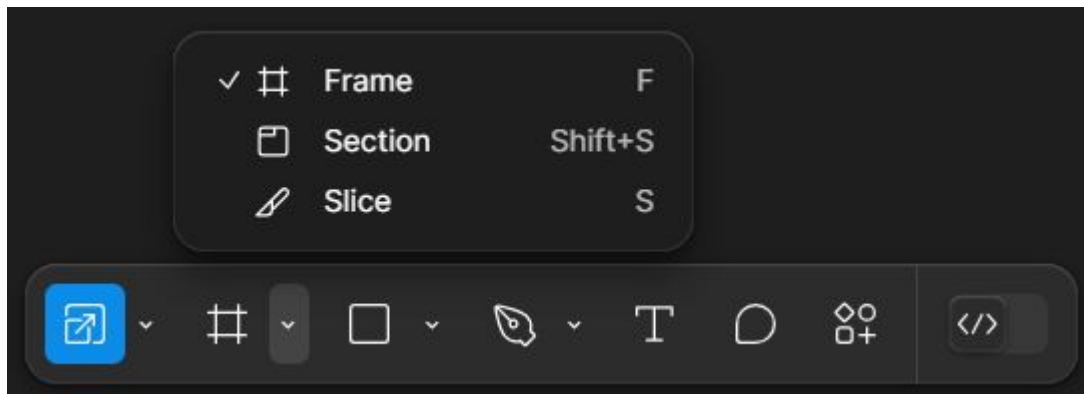

Exploring the toolbars and menu items

Frame

With the Frame tool, you can create a container by choosing from the available presets or by drawing a custom size

You can use the F and A keyboard shortcuts for quickly adding a frame onto your canvas

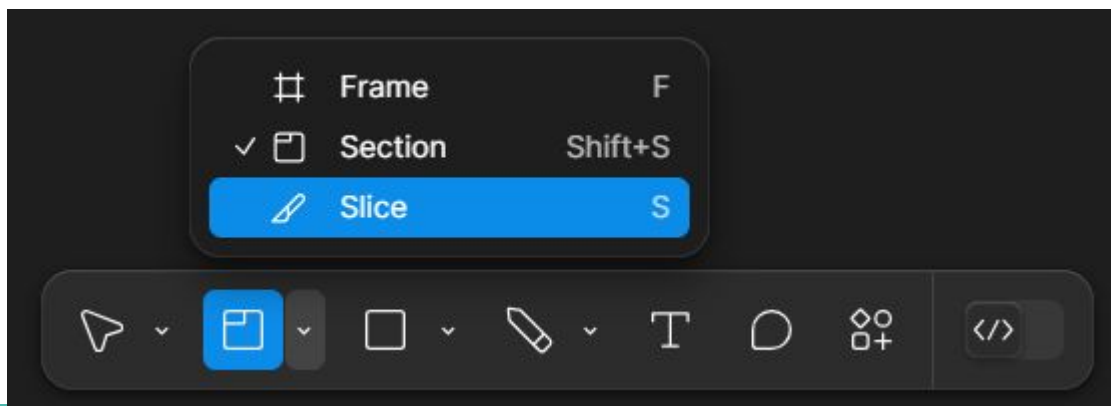

Exploring the toolbars and menu items

Section/Slice

The section tool allows you to visually group areas in your workspace

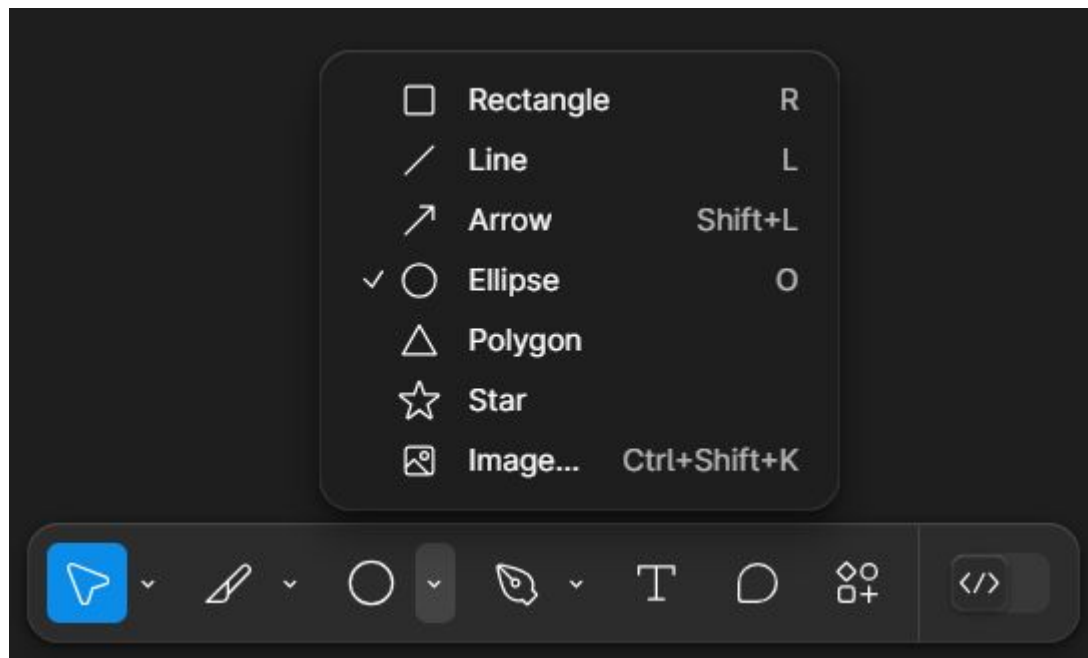

The Slice tool allows you to select and “cut” any areas in your workspace and export those areas with everything they visually contain

Exploring the toolbars and menu items

Shapes

This is a set of tools useful for creating all kinds of shapes, from simple lines to star shapes

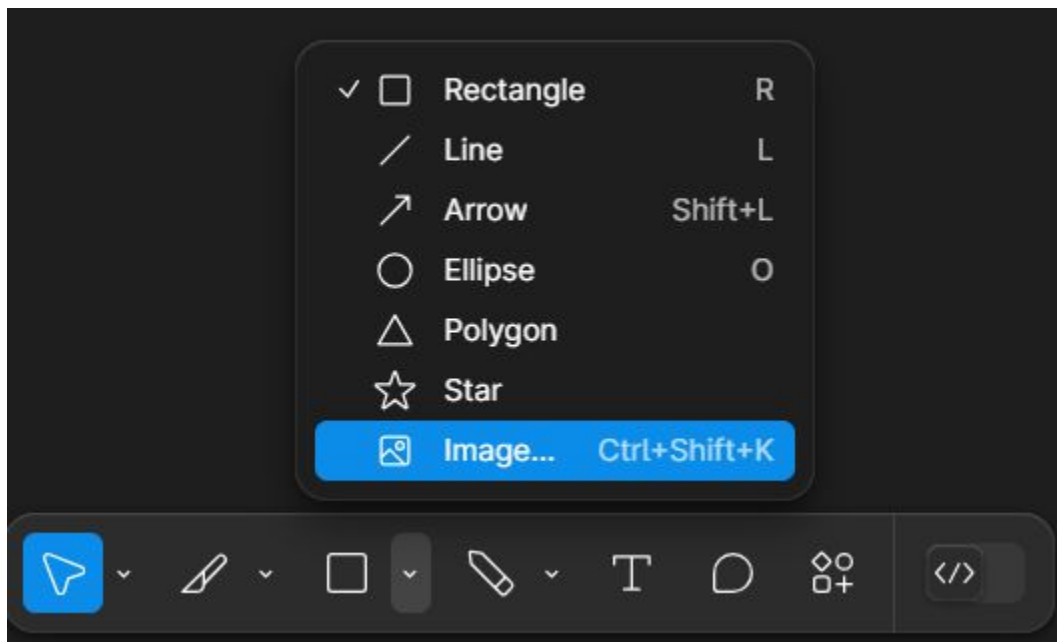

Exploring the toolbars and menu items

Image/Video...

You can add an image or a video to your workspace using this tool

Alternatively, you can directly drag and drop it from a folder on your computer to your workspace

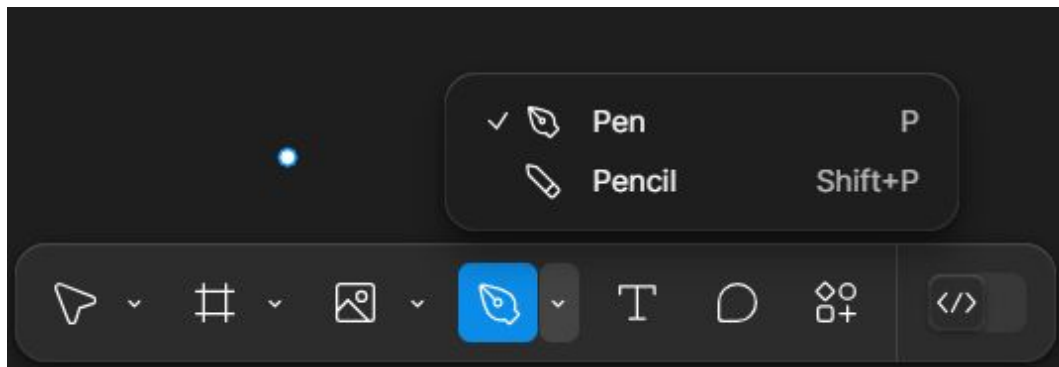

Exploring the toolbars and menu items

Pen

With the Pen tool (P keyboard shortcut), you can draw any shape using so-called Bézier curves

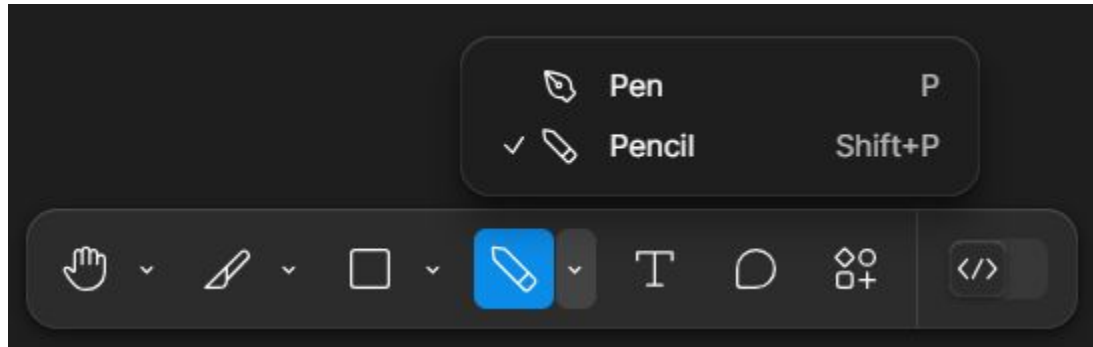

From a simple line to the most abstract element, Bézier curves provide a high degree of control in shaping your designs

Exploring the toolbars and menu items

Pencil

The Pencil tool is for freehand drawing

Exploring the toolbars and menu items

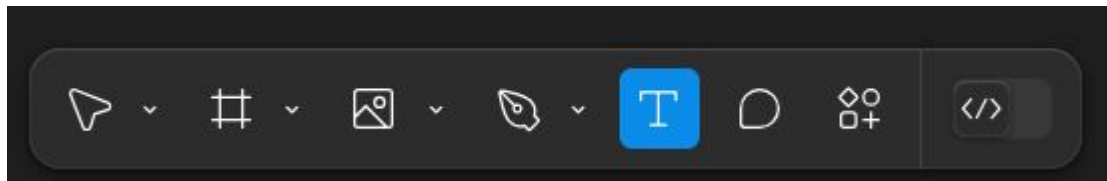

Text

The Text tool allows you to add text to your design

A shortcut for inserting any text is the T key on your keyboard

When you click anywhere on the canvas, you create a variable-width text

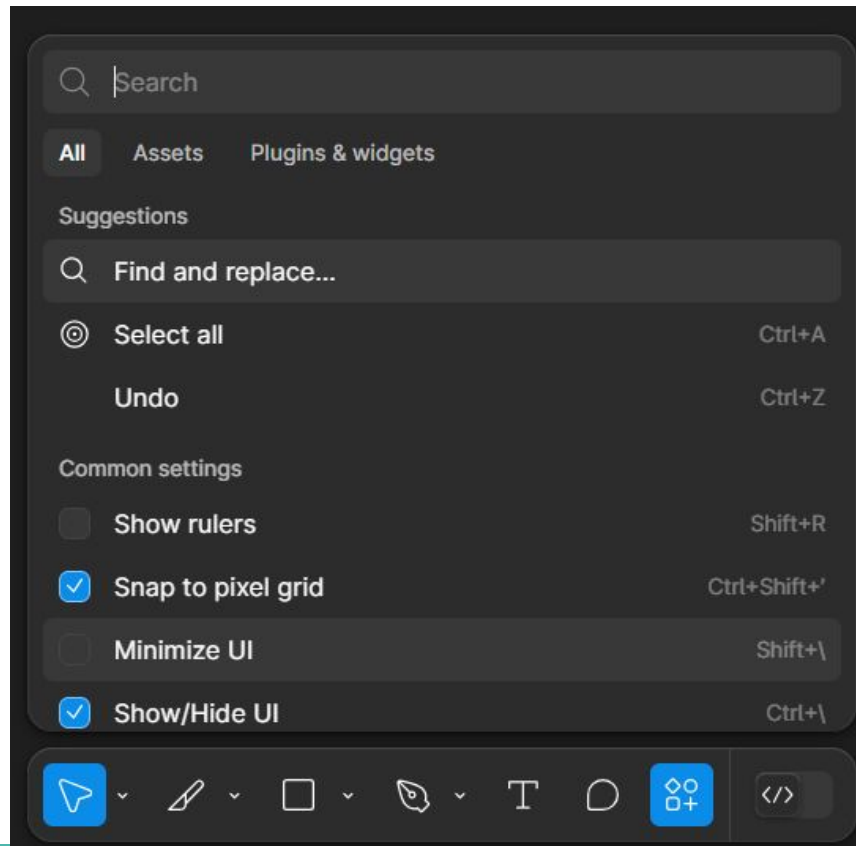

if you click and drag instead of just a single click, you create a fixed-width textbox

Exploring the toolbars and menu items

Resources

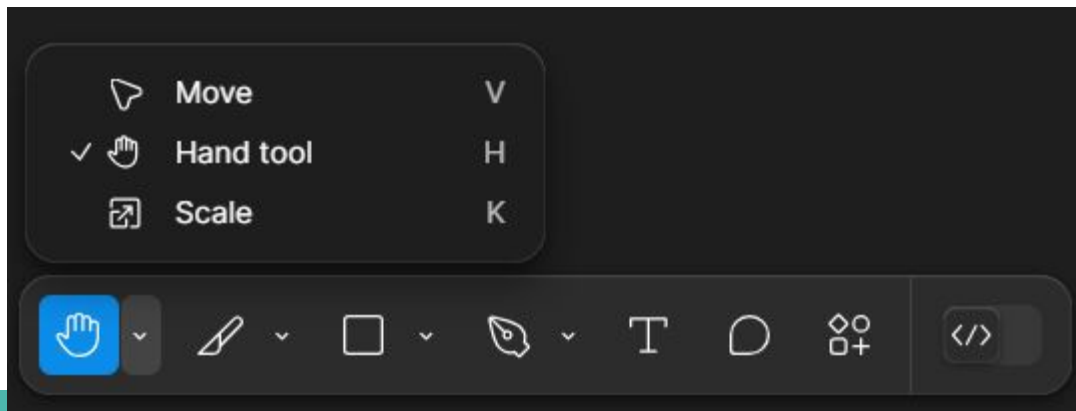

From here, you can quickly access your libraries' components

Exploring the toolbars and menu items

Hand

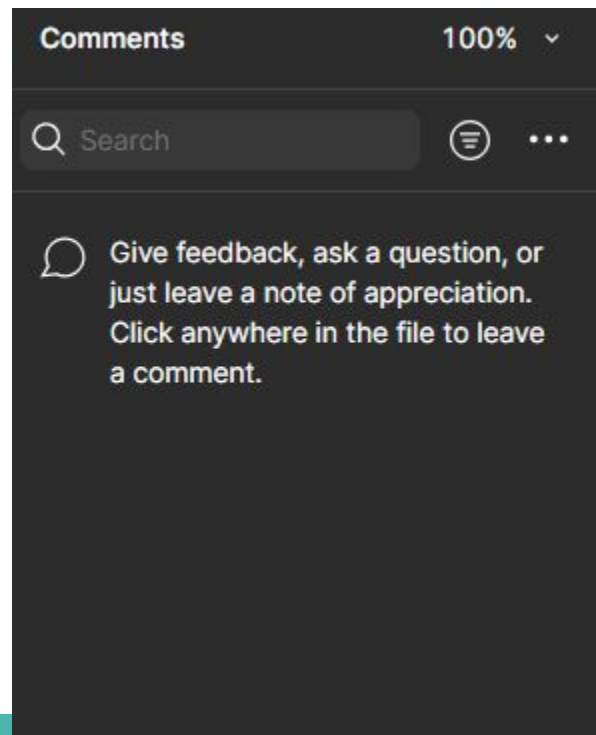

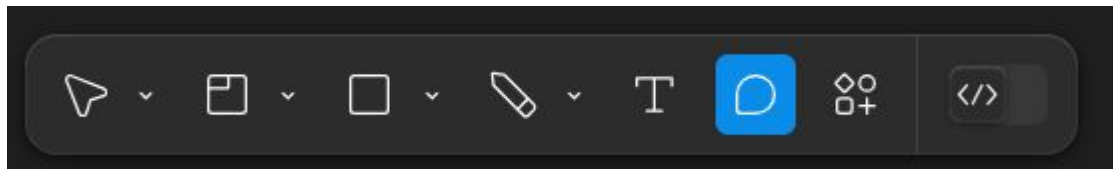

This tool allows you to pan around the workspace using your mouse or trackpad, preventing accidental selection, repositioning, or any other impact on objects on the canvas

Exploring the toolbars and menu items

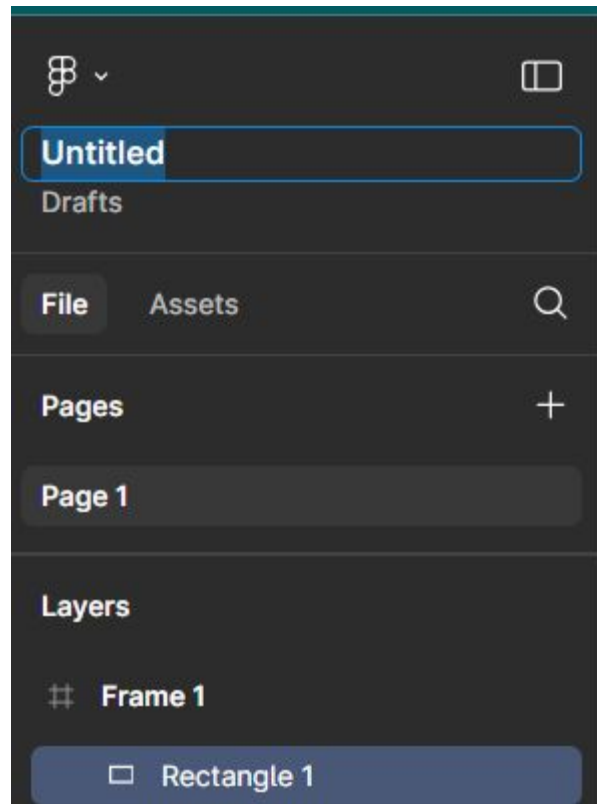

Comments

The Comment tool, which can be switched to with the C key, lets you click anywhere on the workspace and leave a text comment

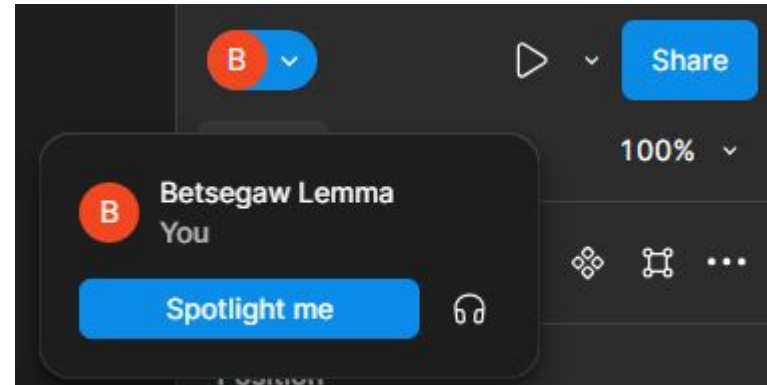

Renaming a file

To rename a file, just click on the current heading and enter the text you want for the name

Active Users

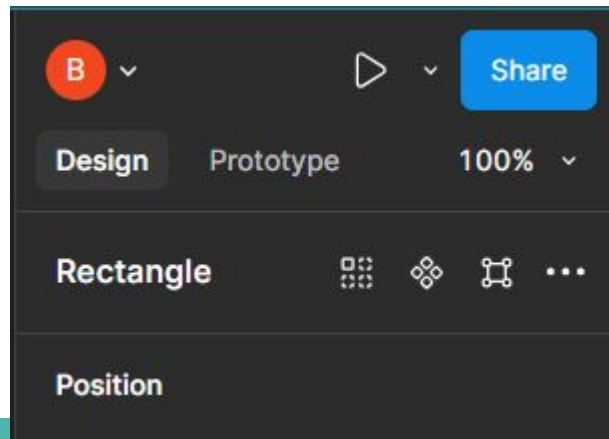

Here, you will have a real-time overview of the online users who are currently in this file

Share

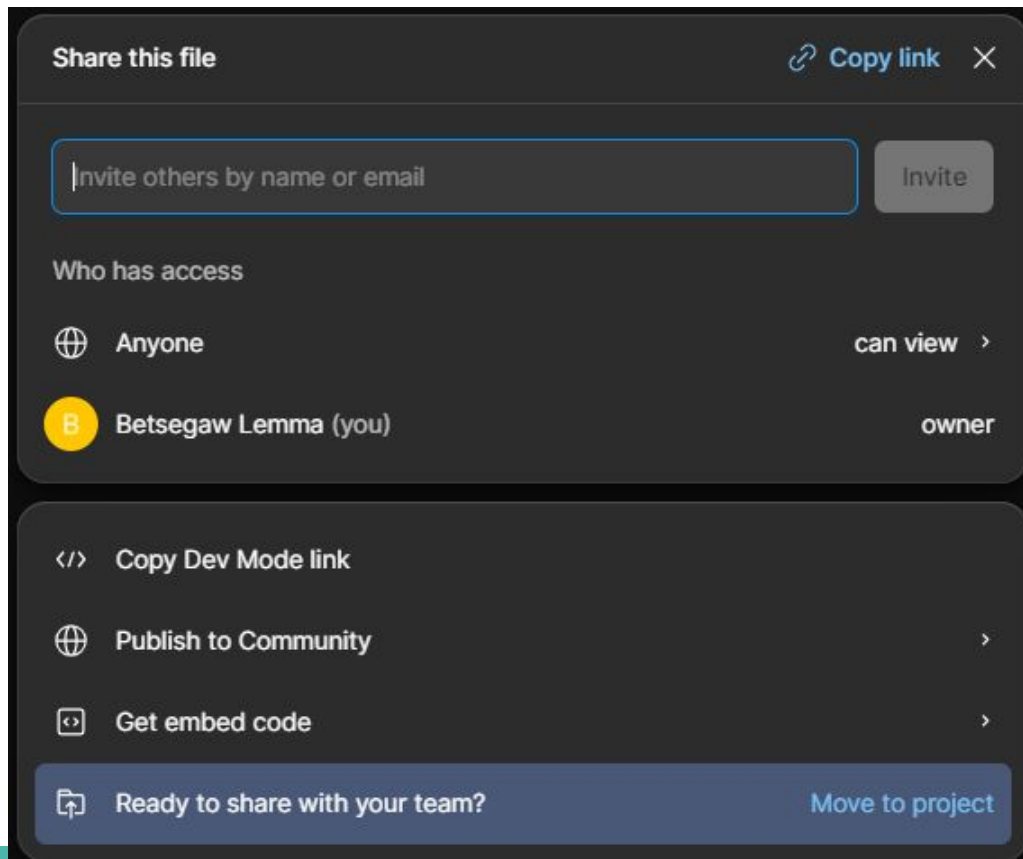

When you click on the Share button, a special dialog box will open where you can not only check the complete list of people who have access to this file and the permissions they have but also add new ones, or get a sharable link that allows you to invite anyone to the project

From here, you can also make your project publicly available to the Figma Community

Share

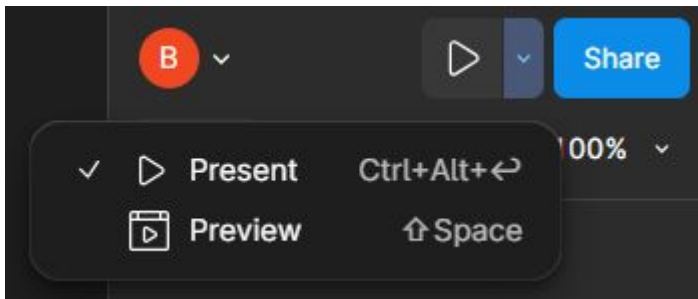

From here, you can also make your project publicly available to the Figma Community

Present

This menu allows you to view both static previews of your chosen frames and complex interactive prototypes

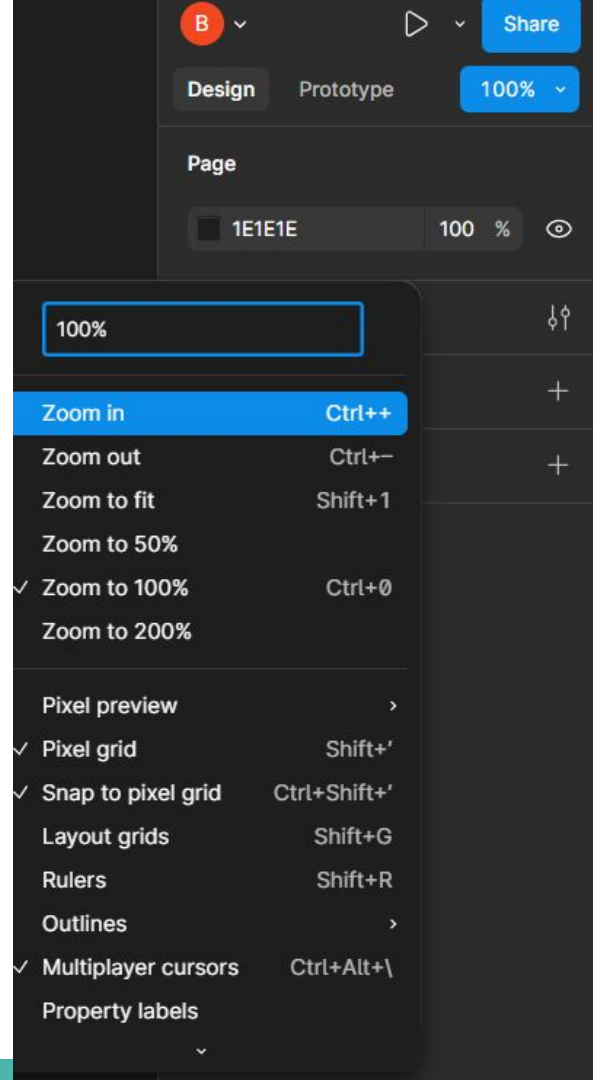

The viewer opens in a separate tab and acts as a separate file, so you can share the preview with selected people or publicly while keeping the project source safe for yourself

Zoom/View

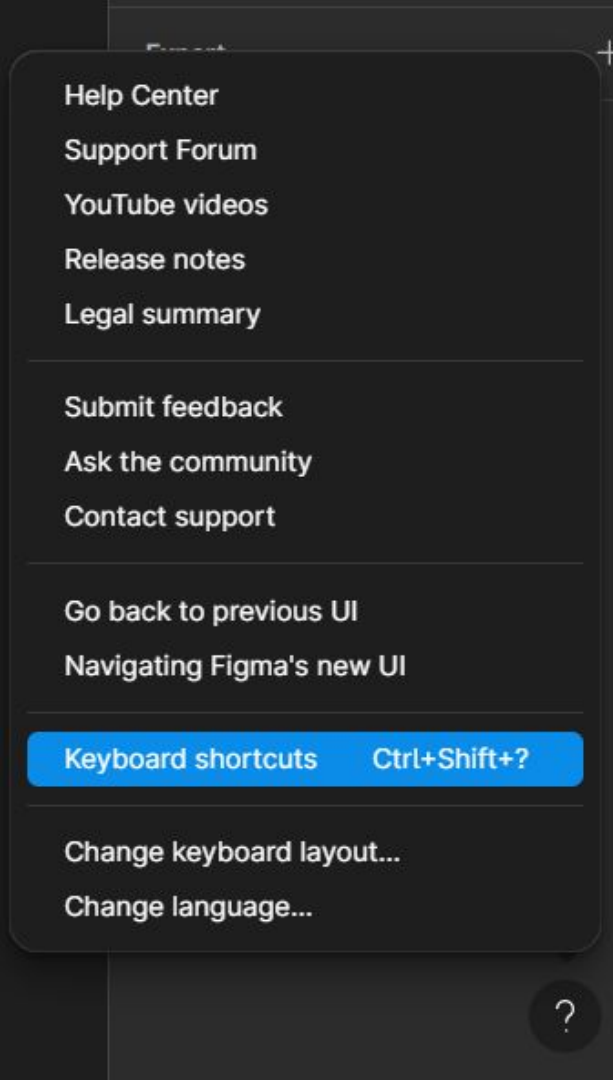

Clicking on it opens a drop-down menu dedicated to zooming and display settings, where you can not only use predefined functions to change zoom values but also manually set them by entering a number

There are also several toggles for options, such as the ability to activate or deactivate rulers

Quick shortcuts

Click the ? button in the bottom-right corner and select Keyboard shortcuts, and you will see a hotkeys panel sorted by the functions they run

Quick shortcuts

Essential	Tools	View	Zoom	Text	Shape	Selection	Cursor	Edit	Transform	Arrange	Components	Layout
Bold/Italic				Ctrl B and I	Text align left			Ctrl Alt L		Adjust font size	Ctrl Shift < and >	
Underline				Ctrl U	Text align center			Ctrl Alt T		Adjust font weight	Ctrl Alt < and >	
Create link				Ctrl Shift U	Text align right			Ctrl Alt R		Adjust letter spacing	Alt < and >	
Strikethrough				Ctrl Shift X	Text align justified			Ctrl Alt J		Adjust line height	Alt Shift < and >	
Turn into a list				Ctrl Shift 7 and 8								

Essential	Tools	View	Zoom	Text	Shape	Selection	Cursor	Edit	Transform	Arrange	Components	Layout
 Move tool				V	 Text tool				T	 Add comment		C
 Frame tool				F	 Rectangle tool				R	 Pick color		I
 Pen tool				P	 Ellipse tool				O	 Slice tool		S
 Pencil tool				Shift P	 Line tool				L			
					 Arrow tool				Shift L			

Quick shortcuts

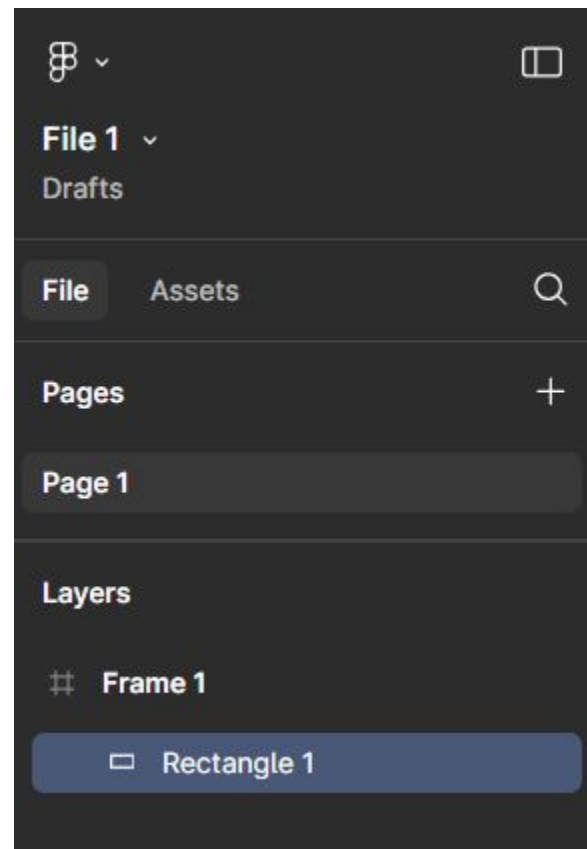

Those filled with blue mean that you have already used them at least once; the gray shortcuts are those that you have not yet tested out

Essential	Tools	View	Zoom	Text	Shape	Selection	Cursor	Edit	Transform	Arrange	Components	Layout
 Move tool				 V	 Text tool				 T	 Add comment		 C
 Frame tool				 F	 Rectangle tool				 R	 Pick color		 I
 Pen tool				 P	 Ellipse tool				 O	 Slice tool		 S
 Pencil tool				 Shift  P	 Line tool				 L			
					 Arrow tool				 Shift  L			

Layers and Pages

Every time you create a new text layer, shape, or any other element, its name is immediately displayed in the Layers panel

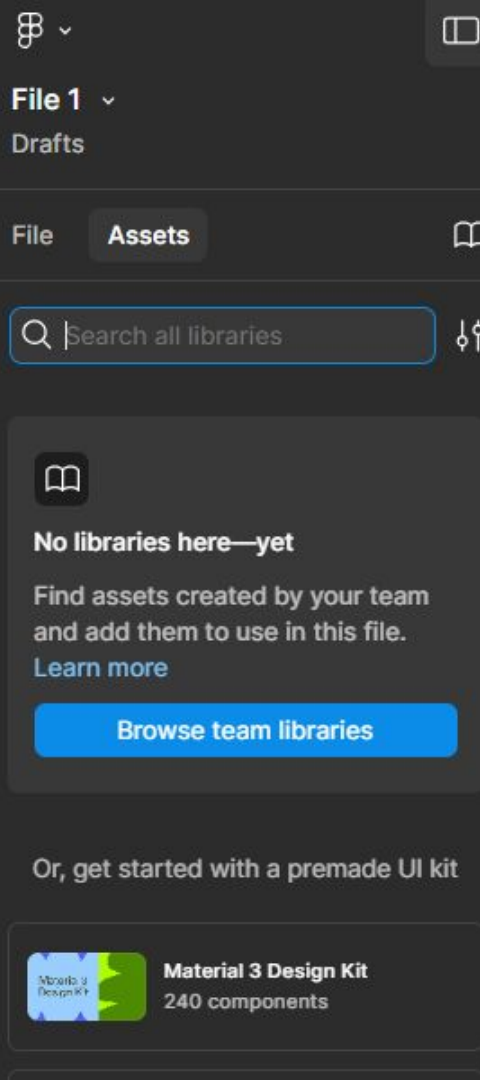

Likewise, when you delete an object from the work area , it will also be removed from the sidebar

Assets

It is used to organize all the elements of your design project for reuse

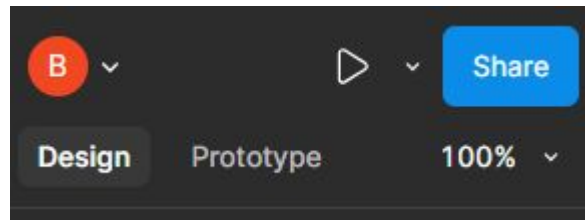

In Assets, you can also find the Team Libraries that lets you use styles and components from other files, either personal or from the Figma Community.

Design

This is the panel tab that Figma opens by default

Whatever you're looking for about visual edits, you'll always find it in the Design panel

Prototype

The Prototype panel allows you to add interactions to your elements and presenting everything dynamically
