

Assignment I- FOR YEAR II PHARMACY STUDENTS.

INDIVIDUAL ASSIGNMENT

ANSWER THE FOLLOWING QUESTIONS ACCORDINGLY

1. List and discuss the characteristics of statistical data?
2. What is the difference between descriptive and inferential statistics?
3. What is the difference between target population, study population and sampled population? Elaborate with examples.
4. What is the difference between parameter and statistics?
5. What is the difference between qualitative and quantitative variables? Give at least five examples for each.
6. What is the difference between dependent and independent variables? Elaborate with an example.
7. What is the difference between primary and secondary data? Give more examples for each.
8. What is the relationship and difference between validity and reliability? Give an example for each of them with explanation.
9. List the different methods of data collection and explain when to use them?
10. Answer the following questions based on the give data below:

The blood glucose level for 40 patients is shown below, based on these data

- A. Construct a frequency distribution table
- B. Find the arithmetic mean?
- C. Find the median? Mode?
- D. Group the given data and calculate the grouped data mean?
- E. Calculate the variance and standard deviation?

44 50 79 63 66 54 56 70

60 87 60 70 59 60 62 88

56 65 74 80 51 83 69 77

58 42 43 85 43 75 55 60

72 67 55 77 48 45 61 47

11. When to use tables and graphs? What is their difference? Can we use interchangeably? If not, why?
12. Elaborate why sampling is needed?
13. What is the difference between probabilistic and non-probabilistic sampling method? List the different types of sampling in each category and discuss when to use them.
